

**Project Design Phase-I  
Proposed Solution Template**

|               |                                     |
|---------------|-------------------------------------|
| Team ID       | PNT2022TMID03200                    |
| Project Name  | Skill / Job Recommender Application |
| Maximum Marks | 2 Marks                             |

| S.NO | PARAMETER                                   | DISCRIPTION   |
|------|---|---|
| 1    | Problem Statement<br>(Problem to be solved) | To develop an end-to-end web application capable of displaying the current job openings based on the user skillset.   |
| 2    | Idea / Solution description                 | We have come up with a skill recommender solution through which the fresher or the skilled person can log in and find the jobs in the job marked that is listed based on their profile. |
| 3    | Novelty / Uniqueness                        | We will use a filtering option, when the job market will be able to filter the jobs according to the profile and skill of the employee/user   |
| 4    | Social Impact / Customer Satisfaction       | Reduce Unemployment and finds job that the user needs.  |
| 5    | Business Model (Revenue Model)              | We can add advertisements, and collect money from user on successful application.   |
| 6    | Scalability of the Solution                 | Highly scalable since there is no website that could show jobs based on the skills, so until unemployment is zero this web app is scalable.   |
